Security and Reliability from a Company You Trust

When it comes to safeguarding your operations, data centers are at the top of the upgrade list. However, as the brain and backbone of any modern, information-driven organization, data center upgrades are far from straightforward.

In addition to being among the most energy-consuming assets for most companies, data-centers are also the most critical. Your company's bottom line suffers when uptime decreases, and unexpected downtime can be catastrophic.

When it's time to build, upgrade, or maintain a corporate data center, the world's leading companies turn to Unity. Unity has deep expertise building, upgrading some of the most mission-critical data centers in the world. From Fortune 50 financial services firms to leading pharma and information technology companies, the world's best organizations know that Unity delivers.

Why Unity?

Professionalism and privacy. Unity is trusted by the world's largest financial services and IT organizations because of its reputation for minimizing disruption while maximizing security around sensitive business operations.

A team you can trust. Our experienced team of project managers, electrical and mechanical engineers, and specialized technicians work together to ensure construction standards, schedule, and design specs are adhered to.

Your partner in quality. As an expert in both initial construction and ongoing on-site maintenance, Unity is more incentivized than its competitors to produce quality, error-free design and construction.

Nationwide reach. Wherever you are, we can serve your data center construction and maintenance needs.

About Unity International Group

Unity was founded in 1974 with the goal of providing exceptional electrical contracting services. Today, Unity is proud to be part of ENGIE, the world's largest provider of building and energy services. We serve the world's most respected companies with the same focus: delivering impactful project outcomes, and superior customer service.
